U90HET9NV

## Skills

React

Node.js

Express

MongoDB

HTML/CSS/LESS

JavaScript

Building/accessing REST API's

Responsive Design

## Experience

### LAMBDA SCHOOL

February 2018 - Present | Remote

- Developed skills in JavaScript(ES6, React), Node, git, deployment to Heroku/Netlify and similar technologies.
- Completed daily challenges and weekly projects based on full stack development.
- Exposed to technologies such as Python, Django, C, authorization/security, etc.
- Worked in mostly group and pair programming environments.

## Projects

### Quilly.io (React and Node.js)

-[github.com/Lambda-School-Labs/CS8-Quilly](https://github.com/Lambda-School-Labs/CS8-Quilly)

-[youtube.com/watch?v=W4RoVPulbg4](https://youtube.com/watch?v=W4RoVPulbg4)

A job board site that I collaborated on with fellow colleagues from Lambda. I focused primarily on the front end portion with my pair programming partner. We worked closely with the backend team to ensure seamless integration. Fully deployed to the web using Netlify and Heroku.

### Conway's Life (React and HTML Canvas)

-<https://github.com/kennington24/Conways-Life/tree/master/projects/life>

This is my version of Conway's Life. Each pixel will react differently depending on how the ones next to it react.

### Starwars API (Node.js, express and MongoDB)

-<https://github.com/kennington24/mongo-iv>

This is an api that fetches data from a Starwars database. Models were then made to store the data in a MongoDB database. Can be exported to a front end application with ease.

## Education

### Lambda School

2018 | Remote

Computer Science emphasis on web development

### Metropolitan State University

2016 | Denver, CO

Computer Science
